Fiber Optic Connector and Cable Assembly Market 2017-2022

Report No: P-775-18
April 2018

Bishop and Associates, Inc. announces the release of a new five-chapter, 157-page research report providing an in-depth analysis of fiber-optic connectors, cable assemblies, and the technologies that enable their use as well as the applications in which they are utilized. Providing a detailed analysis by region and fiber optic connector and assembly type, **Fiber Optic Connector and Cable Assembly Market 2017-2022** highlights likely new fiber optic connector business opportunities for connector and cable assembly companies. Detailed information is provided for the period 2017 through 2022.

Fiber optic technologies have become increasingly important in every aspect of the connector industry. From plastic optical fiber (POF) used in automobile communications systems to embedded optics in high-performance computing (HPC), fiber optic connector use is growing. Although not all regions are growing at the same rate, significant growth is anticipated in all regions over the next five-years, with some regions close to doubling their current sales.

World Connector Market by Region 2017 to 2022 with Five-Year CAGR

With well over 15 different industry standard fiber optic connector types available, customers have a wide variety of connector styles to pick from, all offering unique characteristics and attributes. During the forecast period, the largest revenue opportunities for fiber optic connectors are in the telcom/datacom market sector and LC connectors. The largest growth market is with embedded optics and therefore mid-plane and backplane connectors.
